

Learning Map: Big Idea #3 - Career Exploration and Pathway

Learning maps are used to guide the process of learning; rubrics are for products. You can be at different levels of achievement within each box of the learning map, and you will move towards mastery as you progress with your learning. You will have opportunities to interact with the learning map regularly, to set goals, document your learning, and check in with your mentor/teacher to assess their progress.

Big Idea #3: Career pathways include exploration, planning, reflecting, and adapting.				
	Emerging 0-49	Developing 50-64	Proficient 65-85	Extending 86-100
				
My career exploration includes reflection and adaptability.	More evidence and details are required to highlight my career exploration.	I can demonstrate that I explored one or more opportunities.	I can reflect on multiple opportunities and consider how these experiences will influence my career exploration.	I can reflect on my exploration, share how I adapt to learning along the way, and connect this to my career pathway.
My career pathway includes a sustainable and logical plan (research & budget).	More evidence and details are required to describe my career pathway. More research and a budget are required.	I can demonstrate that I have researched and provided a budget for my career pathway.	I can make connections between my skill set and my career pathway.	I can clearly demonstrate how I am prepared to follow through with my detailed career pathway, and articulate how my pathway connects to my learning story and my skills showcase.
